### SUMMARY

Payroll processing is a critical function in any business. It is essential to provide payment of wages in a timely and accurate manner. Abra Payroll (from Best Software) offers a comprehensive payroll system, with direct connectivity to INFIMACS II Financials.

Abra Payroll provides the resources needed to process payroll accurately and quickly. Save outsourcing fees, gain control of payroll schedules and tax payments, integrate payroll expenses into INFIMACS II

---

## Abra® Payroll

General Ledger, and have current and historical payroll information available when needed.

The information required to produce payroll runs is collected throughout the system. Trial payroll easily reconciles errors prior to final payroll run. Print checks on-site, and on your

schedule. Automatically receive quarterly updates to federal and state tax legislation.

Abra Suite generates accurate payroll tax liability reports and supports the Federal Electronic Tax Payment System (FETPS), enabling the electronic filing of taxes.

No need to worry about the security of payroll data either. Built-in security effectively restricts access to payroll information, even when work is delegated.
