

INFIMACS II® Data Sheet

Integrated Financial and Manufacturing Control System

wInsight® and C/S Glue®

FUNCTIONS

- Export INFIMACS II EV Data into wInsight
- Government Required Reporting
- Graph Views of EV Performance by WBS
- C/S Glue for Scheduling Applications (e.g. MS Project)

FEATURES

INFIMACS II Export

- Creates EDI X12 839 Transaction Set
- Frozen Costs and Budgets for Each Work Package
- Imports into wInsight Administrator
- INFIMACS II Project Data Contract in wInsight
- Contract Overhead Accounts Created from Initial Import

Multi-pane Views

- View Four Different Graphs Simultaneously
- Match Views to WBS Account
- View Schedule with C/S Glue

REPORTS

Government Reports

- Cost Performance Report (CPR) Format 1–WBS
- Cost Schedule Status Report (C/SSR)
- Narrative Reports
- Rollup Options

SUMMARY

wInsight (also known as Win-sight), from C/S Solutions, is the leading application for creating reports, charts, and graphical analyses of WBS and Earned Value data. Government contractors working to meet DoD, DOE, FAA, or DCMC requirements, often use wInsight to produce their reports, charts, and analyses. wInsight is the defacto standard for Earned Value reporting.

INFIMACS II wInsight Export program in the WBS Module creates an EDI X12 839 Transaction set containing frozen cumulative cost and budget data for each Work Package in a Project or Contract. A Project in INFIMACS II is equivalent to a Contract in wInsight. Report header data, i.e. Contractor name, address, Team Leader name, and reporting dates, are also exported from INFIMACS II and initialized when first imported into the wInsight Administrator.

After importing the data into wInsight Administrator, you can view your monthly costs in spreadsheet format or in CPR or C/SSR reports. The Import X12 function in wInsight Adminis-

trator adds five government required overhead accounts to the Contract, which can be maintained directly in wInsight Administrator. You can also change values in wInsight Administrator for “what-if” analyses, without impacting your EV data in INFIMACS II.

In addition to the functions and features in the wInsight Administrator, wInsight, which is a separate program from wInsight Administrator, can be used to display graphical analyses of all levels of your WBS. You can select graphical displays of Cost Variances (CV), Schedule Variances (SV), Estimate at Completion (EAC), breakdown trees, and many more. These are useful for identifying trouble spots or for doing “what-if” analyses. Four different views can be displayed at the same time in wInsight’s Multi-Pane window. If you highlight an account in the breakdown structure, the charts in the other panes change to match that account.

With the addition of C/S Glue, you can synchronize activity schedules in MS Project or other project management software with wInsight’s Earned Value Analyses and Graphs.

wInsight® and C/S Glue®

The wInsight Export program exports activity data to MS Project. This file contains work orders for your project, with their WBS work package and rollup accounts. By clicking on

the C/S Glue icon in the MS Project toolbar, you can compare performance measurement charts in wInsight with schedule status in MS Project. C/S Glue is available for MS Project,

SureTrak, Open Plan Professional, Scitor PS7, and Primavera's P3. Currently, INFIMACS II provides export to MS Project.
